

INTRODUCING ZCORE™ EXPAND

expandable collagen-enriched porcine xenograft

A composite of osteoconductive bone mineral and expandable collagen, Zcore™ Expand is composed of 80% porcine xenograft particulate and 20% porcine collagen by weight. Zcore™ Expand is supplied as a compressed preformed sponge that expands when hydrated, allowing it to take the shape of the defect. The unique expandable property makes Zcore™ Expand a popular option for extraction site grafting and/or sinus augmentation that uses a lateral approach.

100X

80% Zcore™ Porcine Xenograft Particulate

- ▶ Interconnecting macroscopic and microscopic porous structure supports the formation and ingrowth of new bone
- ▶ 88% Void Space: hyper-porosity of porcine cancellous matrix and intra-particle space facilitated by rough particle morphology reduce bulk density of the graft, allowing greater empty space for new bone growth*
- ▶ Derived from porcine cancellous bone, eliminating risk of BSE transmission
- ▶ Heat treated to an optimal temperature that ensures a degree of crystallinity* consistent with native bone mineral to allow for remodeling of the healing bone

20% Type 1 Expandable Porcine Collagen

- ▶ Facilitates handling of the graft particles and acts to maintain the graft material in the defect site
- ▶ Derived from porcine Achilles tendon, eliminating risk of BSE transmission

FUNCTIONAL EXPANSION:

ZcoreTM Expand hydrates and expands almost immediately when introduced to the patient's blood or sterile saline.

Once hydrated, ZcoreTM Expand increases in diameter to fill the void space in a socket or sinus defect.

Socket

5 mm x 17 mm 10 mm x 17 mm EXPANDED

- | ZXSOCKET (1 unit)
- | ZXSOCKET-5 (5 units)
- | ZXSOCKET-10 (10 units)
- | ZXSOCKET-20 (20 units)

Small Sinus

13 mm diam. x 10 mm 17 mm x 10 mm EXPANDED

- | ZXSINUSS (1 unit)

Large Sinus

17 mm diam. x 12 mm 22 mm x 12 mm EXPANDED

- | ZXSINUSL (1 unit)
